

# SURAJ VAGHELA

Seattle, WA | (425) 951-9745 | suvaghela23@gmail.com | linkedin.com/in/suvaghela | github.com/SVOG23  
Portfolio: svog23.github.io/Portfolio/

## Education

### University of Washington, Seattle, WA

Expected June 2027

*Bachelor of Science in Informatics (Data Science), GPA: 3.51/4.00*

- **Honors:** Dean's List (2024, 2025, 2026); iStartup Lab Micro-Grant (2026)
- **Coursework:** Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Research Methods

## Experience

### Founder & Software Engineer

Mar 2026 – Present

*ALPHABYTE, Seattle, WA*

- Shipped **Vouchlist**, a friend-sourced local recommendations app, to the App Store and Google Play as sole engineer, reaching 76 users; built and submitted iOS and Android releases with Expo EAS.
- Set up a CI/CD workflow with AI code review: a second agent reviews every GitHub pull request and either approves it or sends fixes back to the builder agent before merge.
- Built Scout, an AI assistant (in beta with testers) that answers plain-English requests like “affordable 4+ star restaurants in Australia” with friends’ vouchers for home-service pros, restaurants, bars, and travel, using Apple’s on-device LLM and returning only results the user has permission to see.
- Protected user data with Supabase row-level security and SHA-256 contact hashing, so friends are matched without the backend holding readable contacts; added phone-OTP login (Twilio Verify).
- Build every product by directing AI coding agents (Claude Code, Codex): own product design, feature planning, testing, and iteration while the agents write the code.

### Software Engineer Intern

Jun 2025 – Nov 2025

*CloudifyAI Solutions, Inc., Seattle, WA*

- Prototyped a Python ticket recommender on about 2,500 support tickets: NLTK text cleaning, vector embeddings, and top-5 retrieval of similar past resolutions by cosine similarity, improving on TF-IDF.
- Built an n8n workflow that sent each incoming ticket to the Python recommender and emailed suggested resolutions back to the customer.

### Machine Learning Research Intern

Aug 2024 – Sep 2024

*Tech Mahindra (Makers Lab), Redmond, WA*

- Researched spiking neural networks (rate/temporal coding, STDP) as energy-efficient AI; presented my findings.

## Projects

### Kivo – Peer-to-peer hourly sports gear rentals | *React Native, Stripe*

Aug 2026 – Present

- Built a mobile app where users rent and lend gear, with map search, hourly booking, and handover codes.
- Bills renters only for time used via Stripe, with automated owner payouts; nearing App Store release.

### unrot – Open-source tool for AI coding agents | *TypeScript, npm*

Jul 2026

- Published a command-line tool on npm that scans AI agent instruction files (CLAUDE.md, AGENTS.md) and flags outdated instructions, like references to files that were renamed or deleted.
- Measured accuracy by planting 356 known errors in real instruction files: it caught 354 (**99.4%**) and raised zero false alarms across 440 correct examples.
- Ran it on 69 popular open-source projects and reported findings upstream; fixes merged into Microsoft VS Code, PostHog, n8n, and OpenSRE.

### ModelMarketplace – ML model marketplace | *Next.js, Supabase, Stripe*

May 2026 – Jun 2026

- Won a UW iStartup Lab Micro-Grant for a marketplace where developers sell ML models, with four Stripe payment options (purchase, lease, auction, seller subscriptions) and seller payouts via Stripe Connect.

## Technical Skills & Certifications

**Languages:** Python, Java, SQL, R

**Platforms:** Supabase (row-level security), Stripe (payments), Docker (test environments)

**AI & Developer Tools:** Claude Code, Codex, Cursor, n8n, Git & GitHub, embeddings & semantic search

**Certifications:** OpenAI (Agents & Workflows, Applied AI), Anthropic AI Fluency, Google Cloud Gen AI
